

REVOLUTIONIZING THE UDT, ONE CHEEK SWAB AT A TIME.

ToxProtect™ DNA-verified Urine Drug Test (UDT) protects the therapeutic alliance by definitively authenticating samples, revealing mislabeling errors, and detecting urine sample substitutions.

or call (855)236-7900

 By adding a quick cheek swab to the urine collection process, ToxProtect DNA-verified UDT utilizes genomic cross-verification to definitively match a urine sample to its donor. Along with detecting over 100 controlled substances, ToxProtect also reveals the presence of synthetic or substitute human urine. Now you can put an end to the tensions caused when patients challenge adverse UDT results—and focus on treatment goals, instead of conflict resolution.

Whose urine is it? Know for sure with ToxProtect.
